## MSS Vulnerability Management Service

### FEATURES:

- \_ 24/7/365 Risk Management
- \_ CVA provides scan of public and internal networks
- \_ Augment network segments
- \_ Asset Identification identifies
- \_ Vulnerability Identification
- \_ Security Advisory Alerts

### BENEFITS:

- \_ Industry leading MSSP
- \_ Proactively Monitor Your Network
- \_ Meet industry compliance requirements
- \_ Resource Your IT Operations More Effectively
- \_ 99.5 % availability
- \_ CGI CIRT 24X7 service and support

### CGI MANAGED SECURITY SERVICES – VULNERABILITY MANAGEMENT

As a leading and fully functional managed security services provider (MSSP), CGI offers a breadth of service options that are customized to meet your unique business requirements. We call this our building block methodology—adapting and customizing our managed security service lines to best meet your security objectives.

MSS Vulnerability Management service reduces the risks to an organization by simplifying vulnerability management activities, and enabling processes for compliance to government and industry/regulator security standards.

This service includes Continuous Vulnerability Assessment and Security Advisory Alerts. The first closely mirrors the functions of a traditional Vulnerability Assessment (VA). It identifies assets and vulnerabilities associated with the services operating on the assets, and provides recommendations for improvement. It does this by applying a demonstrable, repeatable VA process on a pre-determined periodic basis by performing the following tasks:

- discovering assets and enumerating services,
- identifying known vulnerabilities and prioritizing remedial activities,
- analyzing trends and compiling compliance metrics.

The SAA service provides researched security intelligence information covering many products and current events that are of interest to an organization. CGI's partnership with security research vendors provide:

- delivery of timely, accurate, and continuous updates of threats and vulnerabilities
- monitoring of vulnerability advisories covering over 1700 vendors and over 5500 products,
- Alerts covering Malicious Code and their activities as reported across the globe,
- Intelligence bulletins covering security related topics in the current media,
- access to historical information covering over 10,000 alerts.

As an integral part of the CGI Managed Security Services Security Operations Center (CGI MSS SOC), the CGI Computer Incident Response Team (CGI CIRT) provides 24x7 IDS services and support that includes monitoring network traffic and anomalous activity right down to the packet level.
