

CGI AUGMENTS ROBUST MANAGED SECURITY SERVICES WITH WIRELESS INTRUSION PREVENTION OFFERING

Ottawa, Ontario, April 10, 2006 - CGI Group Inc. (CGI) (TSX: GIB.SV.A; NYSE: GIB), today announced a new wireless intrusion prevention service to provide further value to its large cache of Managed Security Service clients.

CGI MSS offerings are engineered with security in mind. In light of the ever evolving regulatory pressures our global clients are facing, CGI's focus has been on provide services built on the tenets of security (confidentiality, Integrity, and availability) rather than a compliance or afterthought approach, which serves our clients very well, regardless of the audit requirements they face.

As part of the service, CGI Managed Security Services will be able to provide wireless Intrusion prevention sensors compliant with IEEE 802.11a/b/g. These sensors are installed at a client premises to monitor its airspace. Where network devices are prohibited, the WIPS solution helps ensure continuous policy enforcement. By identifying threats to the on-site incident response team and containing the threat immediately, the risk is minimized. For existing wireless network deployments, the client wireless network is monitored for policy violations, and offending devices can be contained until the client incident response team arrives. CGI MSS leads its WIPS solution with industry leading products from AirDefense, Inc.

Hicham Adra, senior vice-president, Ottawa and Western Regions, for CGI said: "We are very proud of our team and their dedication to our global client base. Having an in-depth knowledge of the new and emerging threats and risks to our clients' infrastructure and business is key for us moving forward with new protection services.. We are committed to securing these critical infrastructures and want to continue to be seen as their trusted partner of choice."

With a five year history in the Managed Security Service space, CGI also provides numerous traditional MSS services, supported by almost 30 different technologies, including:

Network Intrusion Detection (NIDS)	SMTP Filtering/Acceptable Use Enforcement
Host-based Intrusion Detections (HIDS)	System Log Monitoring
Anti-Virus/Anti-Spam	Strong Authentication
Personal Firewall (Desktop)	Security Testing and Alerting
	Vulnerability Management

About CGI

Founded in 1976, CGI Group Inc. is the eight largest independent information technology and business process services firm in the world. CGI and its affiliated companies employ approximately 25,000 professionals. CGI provides end-to-end IT and business process services to clients worldwide from offices in Canada, the United States of America ("US"), Europe, Asia Pacific as well as from centers of excellence in Canada, the US, Europe and India.
